## FEATURES

# TRIAQ

TRIAQ® pneumatic actuators are designed and manufactured to provide the highest cycle-life on the market. We can accessorize them to accomplish virtually any control requirement. They are available with various mounting dimension configurations and span eleven models for appropriate torque compatibility. Our extensive inventory and engineering capabilities allow us to respond to your needs with flexibility. We pride ourselves on exceeding customer expectations. Contact us for application assistance.

- ▶ Double acting and spring return
- ▶ Dual travel stops
- ▶ Torques to 36,000 In-lbs
- ▶ DA and SR common end caps
- ▶ ISO 5211 / DIN 3337 mounting pad dimensions
- ▶ Wide base for direct mount to many butterfly valves
- ▶ Substantial pinion bearings mean high cycle life
- ▶ Corrosion resistant hard anodized finish
- ▶ Each unit serialized
- ▶ VDI/VDE 3845 accessory mounting configuration
- ▶ Custom accessory mounting
- ▶ NAMUR solenoid mounting pad

See accessory page for details

# GENERAL TECHNICAL DATA

- Standard working temperature -5°F to 175°F
- Low temperature and high temperature option
- Maximum working pressure 150 psig
- Operating media - clean, dry air, non-corrosive gas or light hydraulic oil

- Air supply 40 psi - 150 psi
- Rotation 100°
- Dual travel stops standard
- Mounting dimensions
  - Accessories to NAMUR - VDI/VDE 3845
  - Valve mounting to ISO 5211 (TR10 - 2R3500)
  - Custom configurations available in quantity
- Permanently lubricated units

## Operation

### Double Acting Operation

#### CCW

Air is supplied to Port A forcing the pistons away from each other (toward ends), rotating drive pinion counterclockwise and exhausting air out of Port B.

#### CW

Air is supplied to Port B forcing the pistons toward each other (toward center), rotating drive pinion clockwise and exhausting air out of Port A.

### Spring Return Operation

#### CCW

Air is supplied to Port A forcing the pistons away from each other (toward ends), rotating drive pinion counterclockwise, compressing springs and exhausting air out of Port B.

#### FAIL CW

Air failure (loss of pressure) allows compressed springs to force pistons toward each other (toward center), rotating drive pinion clockwise and exhausting air out of Port A.

\*(Unit is capable of failure in counterclockwise direction by reversing pistons inside of housing.)

# DIRECT MOUNT FOR BUTTERFLY VALVES

- ▶ Available for many of the most popular resilient seated butterfly valves
- ▶ Call for details and availability
- ▶ Usually requires no additional hardware
- ▶ Lower profile packages
- ▶ Wide base accommodates pattern without transition plate

TRIAC actuators feature a wide base to enable direct mounting to many butterfly valves without transition plates. Contact factory for compatibility with your particular butterfly valve or see A-T Controls' complete line of resilient and high performance butterfly valves.

## Solenoid Valves

- ▶ Direct mount TVC series
- ▶ Nipple mount available
- ▶ Weatherproof/explosion proof construction
- ▶ Intrinsically safe coil available
- ▶ Various voltages - AC or DC
- ▶ Quick exhaust modification
- ▶ 2 or 3 position control
- ▶ Exhaust speed controls

**TVCS-X411-4N**  
**Direct Mount Solenoids**  
**All Accessory Options Available**

## APL Limit Switches

- ▶ Aluminum or Stainless Steel housing
- ▶ Weatherproof/explosion proof construction
- ▶ Dome indicator
- ▶ Easy-Set cams
- ▶ Captive bolts
- ▶ Many switch options
- ▶ AS-I systems
- ▶ Can be mounted on manual valves

## Other Pneumatic Actuators

See stainless steel actuator brochure for detailed information.

See 180° Pneumatic Rack & Pinion brochure for details.

## Positioners

PPR, EPR & SS "Smart" Series

## Declutchable Gear Overrides

2R, 2C, and 2K DGO SERIES

## Other Accessories and Controls

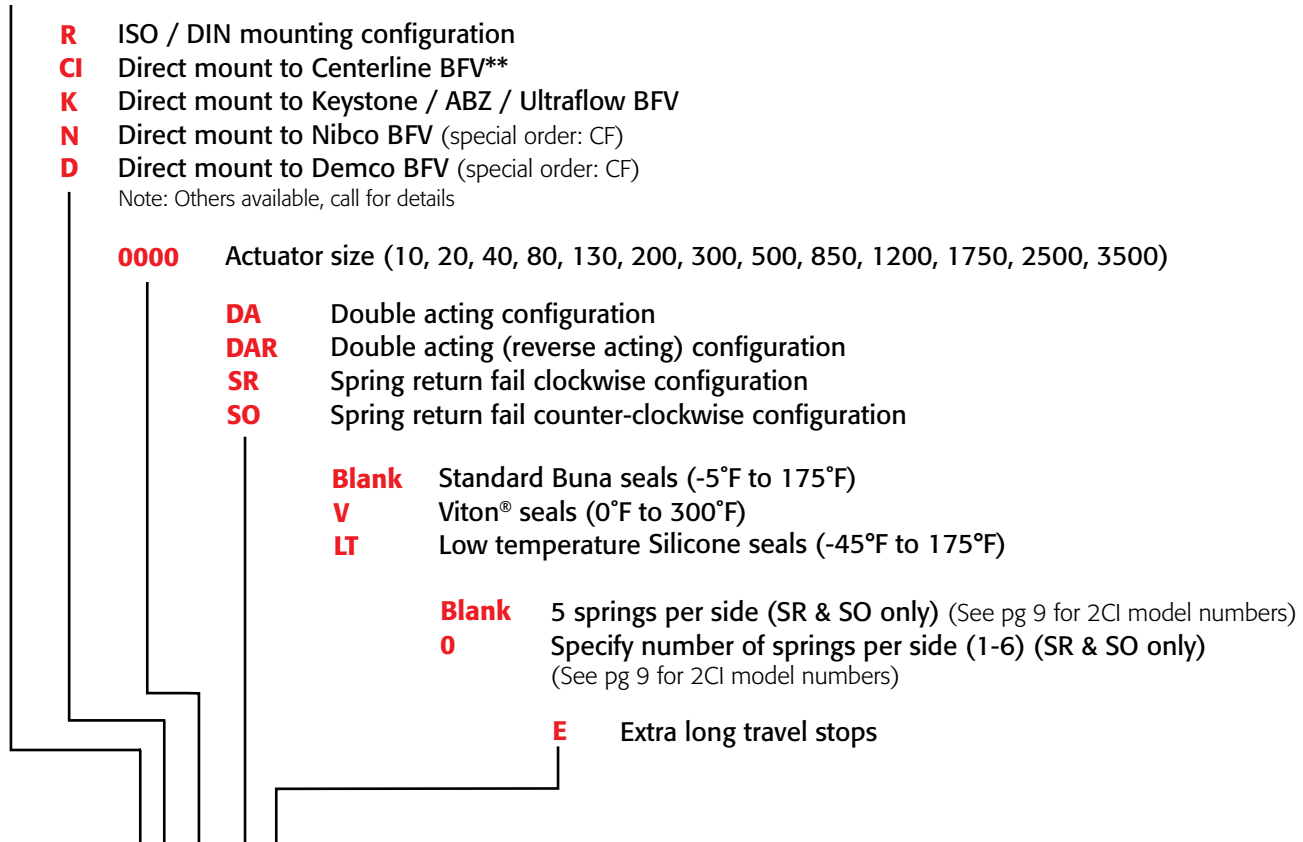

- ▶ Lock-up valves
- ▶ Filter regulators
- ▶ Special tubing/fittings
- ▶ Lockout/tagout hardware
- ▶ Flow controls
- ▶ Speed controls
- ▶ Custom assemblies
- ▶ Dribble control
- ▶ Specials
- ▶ Complete mounting and assembly service

## Sample Specification

Actuators shall be of rugged pneumatic Rack & Pinion Design. Actuator body should be hard anodized to promote long cycle life and corrosion resistance. The actuator body should incorporate a heavy duty, ISO 5211 valve mounting pad with multiple ISO FO bolt circles for ease of mounting. Actuator internals should include dual aluminum pistons for a balanced torque load and a one-piece plated blow-out proof pinion for operator safety. Actuator drive pinions should incorporate significant body housing bearings with heavy duty O-Ring seals to promote high cycle life. The unit should have a dual travel stop feature, with a minimum of 5° of stroke adjustment on both ends of travel, to accommodate numerous valve and damper designs. All actuator fasteners and hardware should be stainless steel for corrosion resistance. The rack & pinion actuator line should be offered in a broad range of torque outputs. The actuator of choice should be A-T Controls (TRIAC®) TR/2R Series Rack & Pinions.

## TRIAC Model Number Matrix

- 2** Triac Rack & Pinion Actuator with double travel stops
- T** Triac Rack & Pinion Actuator with single travel stop (TR10DA, TR20DA, TR20SA only)

**Example: 2R80SRE** (TRIAC Model 80 Rack & Pinion Actuator with Travel Stop in both directions, Spring Return fail clockwise, with Extra long travel stops)

\*\*Note: When ordering a 2CI actuator, please specify the valve size per the 2CI model numbers on page 9.

**Dual Travel Stop Adjustment**

Triac 2R Series features a splined stop collar that provides travel stop adjustments in both the clockwise and counter-clockwise directions. The splined collar ensures minimal hysteresis and repeatable stop positions.
